## What Is Tapentadol?

Tapentadol is a synthetic opioid analgesic with a dual mode of action as a highly selective full agonist and a norepinephrine reuptake inhibitor. It belongs to a class of drugs known as opioid analgesics.

It works directly on the opioid receptors in the central nervous system of the brain to reduce the feeling of pain by interrupting the way nerves signal the pain between the body and the brain.

Tapentadol is used to treat occasional pain severe enough to require an opioid treatment when other pain medicines do not work well enough or cannot be tolerated. The extended-release tablet is used to treat pain caused by nerve damage from diabetes.

This medication will only be prescribed if your doctor decides other non-opioid medicines cannot effectively manage your pain.

*Are you suffering from severe pain that cannot be treated with any non-opioid medications? Then, you must buy Tapentadol online at UpTo 25% discount from Pills Anxiety.*

## Who Should Use Tapentadol?

It is a potent opioid pain reliever that is used in the treatment of severe, occasional pain that will go away when the cause of the pain heals.

It is not usually recommended to treat chronic long-term pain conditions. This medication is used on a doctor's prescription for the short-term [treatment of pain](#) when other opioid and non-opioid medicines are ineffective for the pain.

People suffering from multiple health conditions, such as kidney or liver problems, should not use this medication, and they must consult their doctor to get the best-recommended dose suitable for their health.

Because of its higher risk of addiction, this medication is not advised to be used for long-term treatment of pain.

## Dosing Information

The higher the doses, the more likely you are to experience one or more side effects of this medication. Always use the medicines exactly as prescribed by your doctor.

The dose may vary from person to person according to the intensity of pain and based on a person's age, sex, and health conditions.

After the consumption, the effects of medicines are spread out for a longer time and wear off more quickly than any other opioids.

### For Acute pain:

The initial dose of this medication is one tablet to be taken every 4 – 6 hours. Do not exceed doses of more than a maximum of 700 mg in a day.

### For Subsequent Pain:

A subsequent dose of this medication for severe occasional pain is 50–75 mg or [Tapentadol 100 mg](#) taken

every 4–6 hours. Do not exceed the dose of more than a maximum of 600 mg in a day.

## **For Chronic To Severe Pain:**

The recommended initial dose for adults is 50 mg, to be taken every 12 hours. Take the doses exactly as recommended by your doctor or healthcare professional.

Increasing the dose of this medication can lead to severe respiratory depression that can prove to be fatal to your health. These medications have not been studied on children below the age of 18.

## **Tapentadol Side Effects**

If you are experiencing side effects while using Tapentadol or are concerned about your opioid use, then you must speak to your doctor. Your doctor may advise you on alternatives, whether you need to adjust your dose or not.

If you have recently started to take an opioid medication or changed your dosage, then you may be at higher risk of having certain side effects from this medication.

## **Some common side effects of tapentadol include:**

- Dizziness
- Drowsiness
- Headache
- Vomiting
- Nausea
- Constipation
- Slow or shallow breathing
- Itching
- Skin rashes

## **It can cause severe breathing problems if you are**

- Using any Opioid medication for the first time
- Have increased the dose of opioid medication
- 65 years old or above

- Suffering from lung disease

Avoid excessive or repeated use of this medication. Otherwise, an unintentional overdose of this medication can lead to severe respiratory depression that can be life-threatening to one's health.

## What to Avoid While Using Tapentadol?

To lower the risks of abuse, misuse, and addiction and to prevent any serious side effects of this medication.

You must take the doses as prescribed by your doctor or a healthcare provider and avoid making any mistakes while using this medication.

- Taking other opioid and non-opioid medicines while using this medication can lead to drug interaction that can cause serious withdrawal symptoms.
- Avoid using this medication if you have or have had any history of kidney, liver, or lung disease.
- Avoid drinking alcohol or using any other substance, such as drugs or heroin.
- It is important to dispose of the medicines when not in use or return them to the pharmacy to avoid any misuse or abuse.
- Pregnant women should avoid using this medication to prevent any life-threatening withdrawal symptoms that can affect the fetus.
- Avoid unintentional overdose or repeated use of this medication for a prolonged period of time, as it has the potential to develop a dependency that can lead to addiction over time.
- If you have kidney or liver problems, then you must avoid using this medication to prevent liver damage.

## Final Words

As you already know, opioid medicines are habit-forming, avoid getting used to this medication as it can lead to addiction.

Opioids are indicated for short-term relief of pain, but if you use this medication for a prolonged period of time, then it has the potential to cause many severe health problems, such as respiratory depression and severe liver failure, that can ultimately lead to death.

You can safely use this medication on a doctor's prescription and avoid any harmful effects of this medication

*If you are suffering from any severe occasional pain that requires opioid analgesics? Then, you must contact a doctor and buy Tapentadol online, as prescribed by [Pills Anxiety](#), and get an instant UpTo 25% off on [all medicines](#) and experience express delivery to your doorstep.*
