What Is Xanax?

Xanax, also known by its generic name, Alprazolam, belongs to the benzodiazepine class of drugs, including ***Valium, Ativan, Soma, Klonopin, etc.*** It is a (Schedule II) controlled substance and has a relatively lower risk of abuse and dependence than others.

This medication is generally used to treat [generalized anxiety disorder \(GAD\)](#) and [panic disorder](#). It is not recommended to use this medication without a doctor's prescription, and you must follow your doctor's directions on how to use it.

Benzodiazepine medications work on the central nervous system of the brain and provide instant relaxation from anxiety and panic disorder, producing a calming effect.

Alprazolam is the most commonly prescribed medication in the United States. The sale and purchase of Xanax outside the United States do not comply with the safe-to-use regulation of FDA (Food and Drug Administration).

This medication comes in two forms: immediate-release, which provides instant relaxation, and extended-release tablets, which promote relaxation over a period of time.

Who Should Use Xanax?

This medication greatly helps those who suffer from anxiety disorder so that they can remain calm in stressful situations, reducing panic attacks and calming their body's overactivity.

Xanax is best for panic-inducing situations, as it can be used before an event. Xanax is commonly prescribed for

cognitive symptoms like worrying about performance or others' judgment.

This medication works by enhancing certain neurotransmitters that reduce the activity in the part of the brain that controls reasoning, memory, emotions, and breathing. It is a habit-forming drug that is only recommended for short-term treatment.

Being a benzodiazepine medication, it contains a higher risk of abuse, misuse, and addiction, which is why it is not recommended to use this medication without having a proper consultation with a doctor.

Who Should Not Take Xanax?

You must avoid using it if you have or are suffering from any of these health conditions –

- If you take antifungal medicines such as (itraconazole, ketoconazole)
- Allergic reaction to any Benzodiazepine medication
- Lung, kidney, or liver problems
- Have you ever had seizures
- Drug or alcohol addiction
- Depression or other mental health conditions
- Have multiple health issues
- Pregnant or planning to become pregnant
- Nursing or breastfeeding mother

Dosing Information

The dose of Xanax depends on factors such as age, health, and after an in-depth assessment by a doctor. It is prescribed for short-term pain due to its potential for abuse, misuse, and addiction.

Dose For Anxiety Disorder

- The initial dose to treat anxiety in adults is **0.25 – 0.5 mg**, administered to be taken three times a day.
- The dose should not exceed a maximum of **4 mg** in a day.

Dose For Panic Disorder

- The initial recommended dose for adults is Xanax 0.5 mg of immediate-release tablets to be taken three times a day.
- Do not take a dose of more than a maximum of **10 mg** in a day.
- The recommended dose of an extended-release tablet is [Xanax 1 mg](#), to be taken once a day.
- The maintenance dose for panic disorder is **3 – 6 mg**, which is recommended to be taken early in the morning. The dose should not exceed more than **10 mg** in a day.

Xanax Side Effects

Immediately contact a doctor or a healthcare professional if you experience any of the signs and symptoms of side effects while using this medication to cure them before it can cause any serious health problems.

Common Side Effects Of Xanax

- Dry mouth
- Constipation
- Drowsiness
- Dry mouth
- Hypotension
- Lightheadedness
- Reduced sex drive
- Change in appetite
- Difficulty concentrating

Some Serious Side Effects Of Xanax

- **Liver problems:** Regular and prolonged use of this medication can affect your liver, leading to severe liver damage.
- **Seizures:** These lead to rhythmic shaking of hands, feet, head, arm, or leg that causes inability to do anything.
- **Hallucinations:** You may see or hear things that are not real.
- **Drug dependence:** regular and extended use of Xanax can make you habitual, leading to dependency and addiction.
- **Depression or Suicidal thoughts:** Thoughts of harming yourself or suicide.

- **Breathing problems** – Overdose can affect the respiratory system, causing difficulty in breathing and leading to slow or shallow breathing.
- **Severe allergic reactions:** Allergic reactions are rare, but if you experience any allergic reactions such as itching, rashes, hives, or swelling on the face, lips, tongue, or throat.

What To Avoid While Using Xanax?

To prevent any severe side effects, withdrawal symptoms, and drug interaction. You must know these things before using Xanax to ensure its safety and effectiveness.

- Talk to your doctor if you are habituated to any substance or if you have any substance use disorder.
- Avoid doing any activity that requires your focus and attention, such as driving or using electronic equipment.
- Avoid increasing and repeating the doses. Otherwise, an overdose of this medication can slow or stop your breathing.
- Stop using this medication once your treatment has been done to avoid dependency and addiction to this medication.
- Avoid alcohol consumption during the treatment to prevent withdrawals.
- Do not continue to use this medication after your treatment has been completed and stopped by your doctor.
- Having grapefruit or grapefruit juice can increase the risk of side effects caused by Xanax.

Final Words

Benzodiazepines are highly habit-forming drugs that can make a person habitual if used regularly for a prolonged period of time. Be honest with your doctor about your health conditions so that he can recommend the best dose according to your physical and mental health conditions.

Due to its higher risk of abuse, misuse, and addiction, it is not recommended to use this medication without

consulting a doctor. Do not share this medication with others, and keep it out of reach of children to prevent any serious side effects of this medication.
